SUMMARY

I've been shipping for clients since 2010 - most hire me again, and some of what I build is still powering businesses a decade later. Lately, I've focused on early-stage environments where moving fast, iterating quickly, and cutting unnecessary processes are essential. I enjoy building software that delivers the greatest business impact and always keep the company's context and goals in mind—for example, building-toward product-market fit is very different from scaling after investment. I also take on broader challenges, from mentoring and leading teams to shaping system architecture. Think of me as a tech co-founder for hire; I'll drive impact and adapt to the business needs by stepping out of the traditional Product Engineer role whenever needed.

WORK EXPERIENCE

Senior Product Engineer · Cinematik

Jun 2024 – Present

- Improving a Rails' monolith robustness against peak-time race conditions
- Integration with Meta and Google APIs for hyper-local ads
- Improving checkout process
- Optimizing data pipelines and reporting

Senior Product Engineer · Pragmatic Genomics

May 2023 – Present

- Software and infrastructure changes and advisory work to unlock a new client category for sales.
- Vast improvements to sequenceserver.com infrastructure as a code to predict and offload complex gene sequence search queries to be executed asynchronously on high computing power servers.
- Zero downtime deployments. Single Sign-on (SAML) integration.

Software Engineer (contract) · Cherrypick (formerly Lollipop)

Feb 2021 – Sept 2022

- Rapid prototyping, development and experimentation to validate product market fit for an early stage startup building a smart grocery shopping assistant.
- Fun challenges involved integrating with unstable, often undocumented 3rd party APIs, developing experimental AI-assisted features, distributed state management and rapid evolution of internal twirp APIs.
- Rapid AI-assisted development of a web front-end client

Software Engineer (contract) · Honeycomb/Peach

Sept 2017 – Dec 2020

- Developed features to quality-check, transcode and distribute video assets on a system with a central monolith and a few supporting services.
- After a merger with IMD Media, and rebranding to Peach, worked on reusing services by the two systems, maintained AWS infrastructure and made it more cost effective; designed and architected APIs.

Developer (full time) · Various companies

Jan 2010 – Present

- building a GitHub-like application to publish Service Manual content on GOV.UK; updating and improving the Smart Answers app;
- building a complicated internal project management software for a knowledge broker AlphaSights;
- building a social marketplace platform (Shopa);
- migrating legacy systems to new RESTful API services (UK Data Archive);

EDUCATION

University of Essex

Jan 2010 – Jan 2011

with distinction in MSc Advanced Web Engineering

Vilnius University

Jan 2006 – Jan 2010

Software Engineering, Computer Science

SKILLS

Backend	Ruby, Rails, Sinatra, Elixir, Phoenix
Frontend	JavaScript, HTML, CSS, React, Tailwind, Vite, Shadcn
DevOps/Infra	Terraform, Amazon AWS, Heroku, GCP, Kamal
Databases	Postgresql, ElasticSearch, MySQL
Tools	git, zsh, *nix, Claude Code, Codex, Cursor
Methodologies	Kanban, TDD, continuous delivery, metrics-driven decisions, AI assisted development

PROJECTS

inboxairlock.com

a SaaS product to manage Gmail inbox.

[An open source guide to becoming a contractor in the UK](#)
