

Tadas Tamošauskas

Senior Product Engineer

PERSONAL DETAILS

Address Central London, UK

<http://codeme.lt>

PERSONAL STATEMENT

I've been solving business problems with my programming and leadership skills since 2010.

Lately, I've focused on early-stage environments where moving fast, iterating quickly, and cutting unnecessary processes are essential. I enjoy building software that delivers the greatest business impact and always keep the company's context and goals in mind—for example, building toward product-market fit is very different from scaling after investment.

I also take on broader challenges, from mentoring and leading teams to shaping system architecture. Think of me as a tech co-founder for hire; I'll drive impact and adapt to the business needs by stepping out of the traditional Product Engineer role whenever needed.

EXPERIENCE

Senior Engineer
Cinematik

2024 Jun - Now

- identifying and automating
- Improving a Rails' monolith robustness against peak-time race conditions
- Integration with Meta and Google APIs for hyper-local ads
- Improving checkout process
- Optimizing data pipelines and reporting

Technologies: Ruby, Rails, Hotwire, Postgresql

Senior Engineer
Pragmatic Genomics

2023 May - Now

Software and infrastructure changes to unlock a new client category for sales.

Vast improvements to `sequenceserver.com` infrastructure as a code to predict and offload complex gene sequence search queries to be executed asynchronously on high computing power servers. Zero downtime deployments. Single Sign-on (SAML) integration.

Technologies: Terraform, AWS, Docker, Ruby, Sinatra

Software Engineer (contract)
Lollipop

2021 Feb - 2022 Sep

Rapid prototyping, development and experimentation to validate product market fit for an early stage startup building a smart grocery shopping assistant. Fun challenges involved integrating with unstable, often undocumented 3rd party APIs, developing experimental AI-assisted features, distributed state management and rapid evolution of internal twirp APIs.

Technologies: Ruby, Hotwire, Tailwind, Twirp, OpenAI APIs.

Software Engineer (contract)
Honeycomb/Peach

2017 Sep - 2020 Dec

Developed features to quality-check, transcode and distribute video assets on a system with a central monolith and a few supporting services. After a merger with IMD Media, and rebranding to Peach, worked on reusing services by the two systems, maintained AWS infrastructure and made it more cost effective; designed and architected APIs.

Technologies: Ruby, Elixir, RSpec, Capybara, Postgres, Ansible, AWS.

Developer (full time)
Various companies

2010 - 2015

Various product/service companies where I was working, among other things, on:

- building a GitHub-like application to publish Service Manual content on GOV.UK; updating and improving the Smart Answers app;
- building a complicated internal project management software for a knowledge broker AlphaSights;
- building a social marketplace platform (Shopa);
- migrating legacy systems to new RESTful API services (UK Data Archive);

EDUCATION

MSc Advanced Web Engineering (with distinction)
University of Essex

2010 Jan - 2011 Jan

BSc Software Engineering, Computer Science
Vilnius University

2006 Jan - 2010 Jan

OTHER

Projects and Open Source

- enoughemail.com - a B2B product for protecting organisations from unwanted email.
- An open source guide to becoming a contractor in the UK <https://github.com/tadast/switching-to-contracting-uk> - pdfcv.com
- a decade-old side project that still has paid users. This CV was created using it.
- My contributions to Ruby on Rails: <http://contributors.rubyonrails.org/contributors/tadas-tamosauskas/commits>
- Micro Cosmos - fun 2D experiments with procedural generation
- Canver - a small drawing web app for touch-screen devices that uses no external libraries
- A react.js based {json:api} document viewer: <http://codeme.lt/json-api-document-viewer>

Tech Buzzwords

Ruby, Rails, Sinatra, Elixir, Phoenix, RSpec, Minitest
JavaScript, HTML, CSS, React, Tailwind
Terraform, Ansible, Amazon AWS, Heroku
Postgresql, ElasticSearch
git, zsh, *nix
Kanban, TDD, continuous delivery, metrics-driven decisions
